

**HOT AIR GENERATOR MOD. GAC 60**

The generator is put in the plastic materials drying line and has the function to dry the water required to make the residual humidity on the product evaporate.

**STRUCTURE**

The structure is made in metal frame bent by press and insulated to get the maximum

thermal efficiency.

Electric and heating resistances with fins and cylinder-shaped.

Security system controlled by thermo-control drill

**TECHNICAL DETAILS**

Installed power:

KW. 60 + 0,75

**HOT AIR GENERATOR MOD. GAC 90**

The generator is put in the plastic materials drying line and has the function to dry the water required to make the residual humidity on the product evaporate.
